**NB. All flexible inserts have an angular misalignment capacity up to 4 deg.**

DUNFLEX couplings can accommodate simultaneous maximum misalignment in all planes without imposing undue loads on adjacent bearings and the excellent shock absorbing properties of the flexible insert reduce vibration and torsional oscillations. Inserts are available in natural rubber compounds for use in ambient temperatures of -15°C to +70°C and chlorophene compound should be used when fire resistance and anti-static (F.R.A.S) properties are required.

## HRC COUPLING ENGINEERING DATA

HRC Couplings - These semi elastic couplings designed for general use purpose use, permit quick and easy assembly by means of Taper Lock bush fixing. Fully machined outside diameters allow alignment by simple straight edge methods. Shaft connection is 'fail safe' due to interacting dog design.

## DUNFLEX COUPLINGS

### Description

DUNFLEX coupling flanges are available in either F (Taper Bush fits inside) or H (Taper Bush fits outside) or pilot bored (PB) which can be bored in house to the required size. They can accommodate simultaneous misalignment without imposing undue loads on adjacent bearings, they have excellent shock absorbing properties that reduces vibration and torsional oscillation. Inserts are available in either natural rubber for use in ambient temperatures between -50 °C & +50 °C or chloroprene rubber for use in temperatures between -15 °C and +70 °C fire resistance and anti-static properties (F.R.A.S).

Notes.

- G = Wrench clearance needed to allow for the tightening or loosening of the bush on the shaft as well as the flange clamping screws.
- E = Half the distance required between flanges faces.
- # = Weight and inertia figures are for a single flange including mid range bore, clamping ring, screws and half of an insert.

## HRC COUPLINGS

### Description

HRC coupling flanges are available in either F (Taper Bush fits inside) or H (Taper Bush fits outside) or pilot bored (PB) which can be bored in house to the required size. These semi-elastic couplings are designed for general purpose use, they permit quick and easy assembly by means of taper bush fixing to the mating shaft.

Inserts are available in either natural rubber for use in ambient temperatures between -50°C & +50°C or chloroprene rubber for use in temperatures between -15°C and +70°C fire resistance and anti-static properties (F.R.A.S).

COUPLINGS

### JAW COUPLING

#### Description

Jaw coupling flanges are available either pilot bored (PB) which can be bored in house to the required shaft size they are also conveniently held in stock in all popular metric and imperial bore sizes with corresponding key way and 2 grub screws at 90° to each other for securing to a shaft.

They suit general purpose applications that cater for misalignment, shock loads and damp out small amplitude vibrations.

Angular misalignment capacity up to 1 deg.

Parallel misalignment capacity up to 0.38mm

Mass is for a complete coupling with a pilot bore

Nitrile insert temperature range -40°C to 100°C

COUPLINGS

**RIGID COUPLING DATA**

**Description**

Taper Bore Rigid Couplings provide a convenient method of rigidly connecting ends of shafts. These couplings have a male and female flange fully machined. The male flange can have the taper bush fitted from the Hub side (H) or from the Flange side (F), the female flange always has the bush fitting (F).

This gives two possible coupling assemblies (HF) and (FF). When connecting horizontal shafts, the most convenient assembly should be chosen. When connecting vertical shafts use assembly (FF) only.

All dimensions in millimetres unless otherwise stated.

\* J is the wrench clearance to allow for tightening and loosening the bushing on the shaft. The use of a shortened wrench will permit this dimension to be reduced.

† H is the distance between shaft ends.

‡ Masses given are for couplings with mid-range bore Taper Lock Bushes.
